# Python - Add Set Items

Previous

Next >

# Add Items

Once a set is created, you cannot change its items, but you can add new items.

To add one item to a set use the add() method.

### Example

Add an item to a set, using the add() method:

```
thisset = {"apple", "banana", "cherry"}
thisset.add("orange")
print(thisset)
```

Try it Yourself »

# **Add Sets**

To add items from another set into the current set, use the update() method.

### Example

Add elements from tropical into thisset:

```
thisset = {"apple", "banana", "cherry"}
tropical = {"pineapple", "mango", "papaya"}
thisset.update(tropical)
print(thisset)
```

Try it Yourself »

# Add Any Iterable

The object in the update() method does not have to be a set, it can be any iterable object (tuples, lists, dictionaries etc.).

# Example

Add elements of a list to at set:

```
thisset = {"apple", "banana", "cherry"}
mylist = ["kiwi", "orange"]

thisset.update(mylist)

print(thisset)
```
